

Deep Learning

Replacing an expert
with a system
then it is ML

Cancer detection
Loan approval

decent amount
of data

Less Computation

MS
800

27 km / litre

Replacing a common
human being activity
with a system then
it is a deep learning

Driving car

Image Detection -

Language Translation

Voice Recognition

Text classification

Deep Fake

Huge amount of
data to get better
result

High Computation

Ferrari

Understanding ML

Feature Selection \longleftrightarrow experts
DL \rightarrow No Feature Selection

Artificial
Intelligence

giving the
intelligence
to the
system
Artificially
That can
be done
by DL

Deep learning

Algorithm
that learns
what feature
matters
and implemented
the way human
brain works

Neural Networks

Common
class of
deep learning
algorithms
which is
built using
neurons

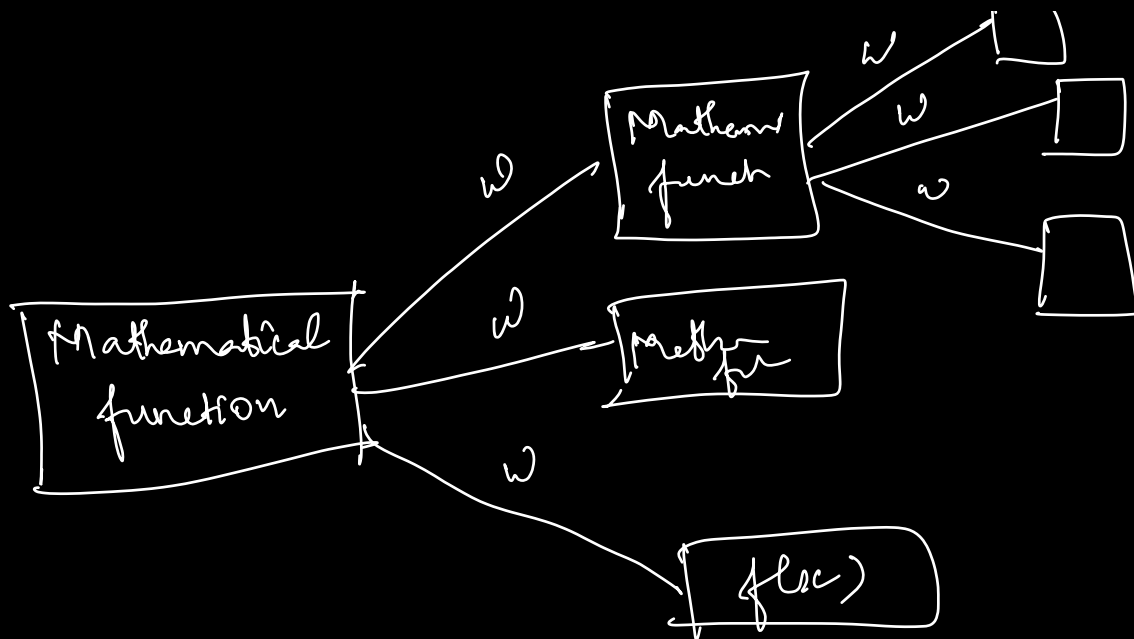

Neurons

basic
building
block of
Neural
Network
which can
basically
'Learn'

Single Neuron

$$y = \max_{\text{param}} f$$

$$w_1 = 2 \quad w_2 = 3 \quad w_4 = 1$$

$$= 1 \times 2 + 3 \times 3 + 4 \times 1$$

$$= 2 + 9 + 4$$

$$= 15$$

$$y = x_1 w_1 + x_2 w_2 + x_3 w_3 + b$$

$$w_4 = 1 \quad w_5 = 2$$

$$y = 10 \times 1 + 15 \times 2$$

$$= 10 + 30$$

$$= 40$$

Linear regression

$$w_1 x_1 + w_2 x_2 + w_3 x_3 + b$$

$$(Wx) + b$$

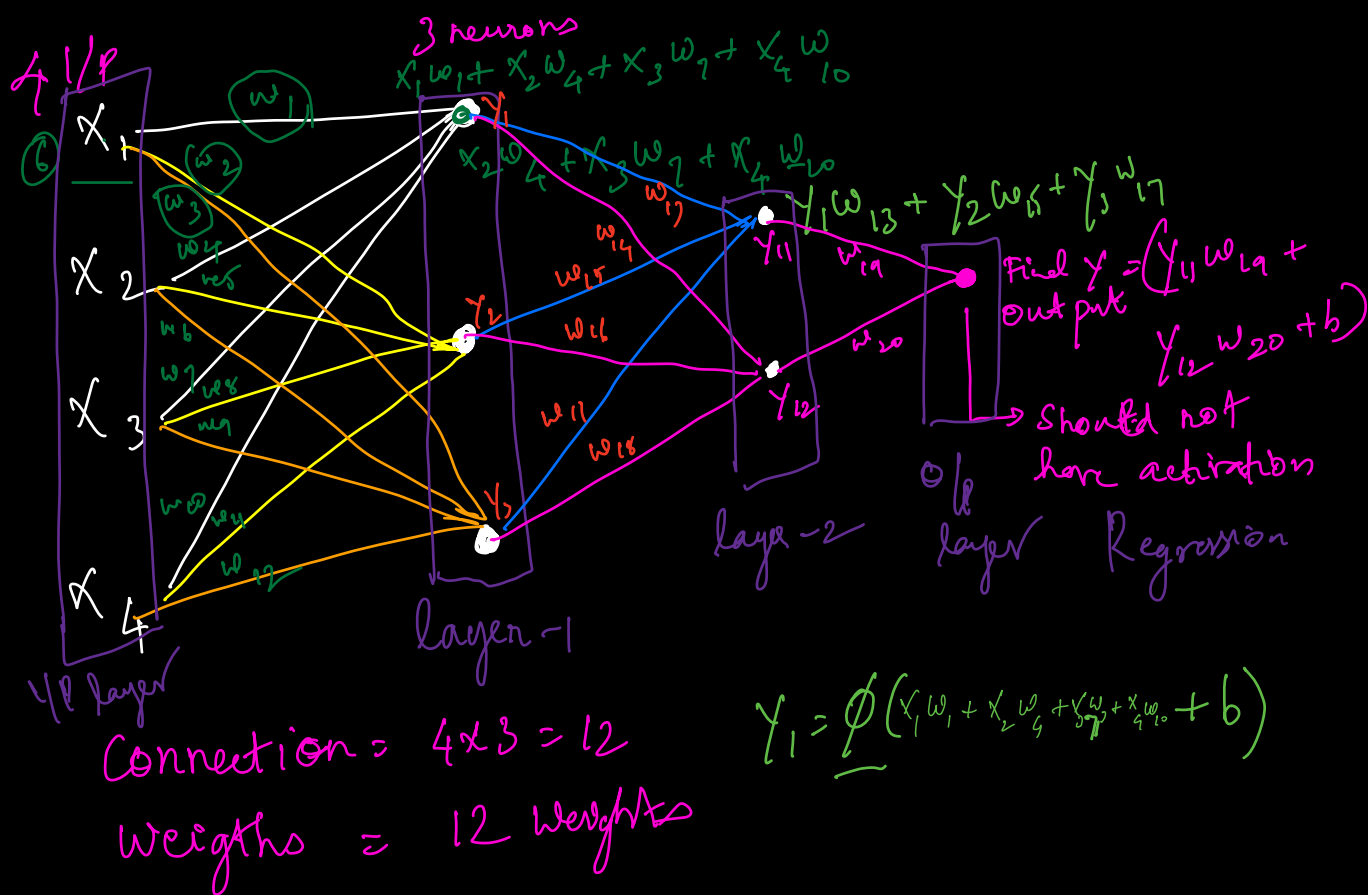

Logistic Regression

Sigmoid function

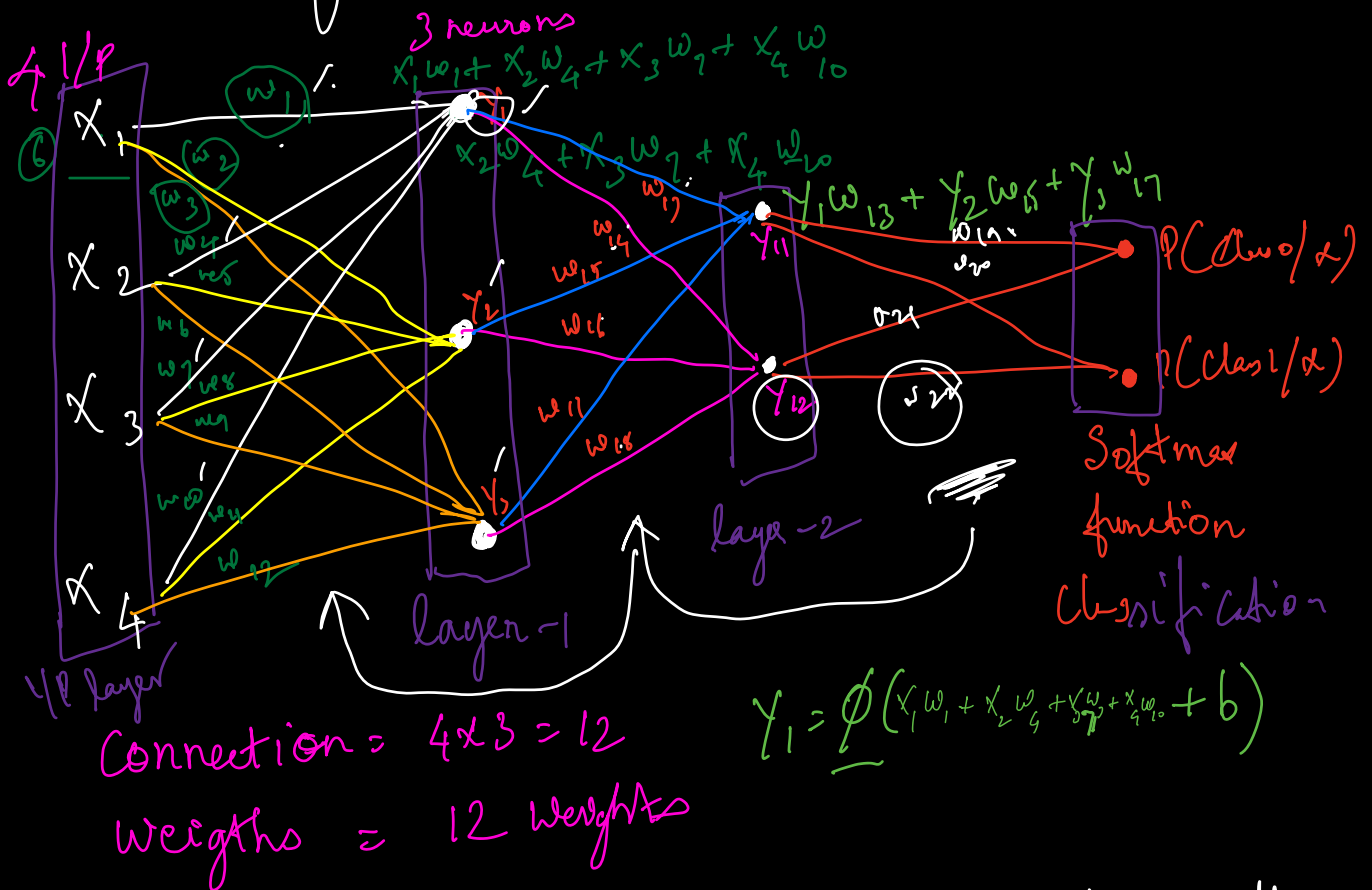

$$= \frac{1}{1 + e^{-z}}$$

z

Classification (Binary)

1 \Rightarrow Scalar

$[1, 2, 3] \Rightarrow$ Vector

$\begin{bmatrix} [1, 2, 3] \\ [5, 6, 7] \end{bmatrix} \Rightarrow$ Matrix

$$\begin{bmatrix} \begin{bmatrix} 1, 2, 3 \\ 5, 6, 7 \end{bmatrix} \\ \begin{bmatrix} 1, 6, 7 \\ 8, 9, 10 \end{bmatrix} \end{bmatrix} \Rightarrow \text{Tensor}$$

Back Propagation
